

Is there anything more important than the health of your family?

## Benefits of Water Conditioning

- Provides great tasting, fresh water from the faucet.
- Removes chlorine, bad taste and odor from water.
- Tames hard water without the unhealthy addition of sodium (salt) or potassium.
- Leaves beneficial minerals in water ("softeners" strip minerals out of the water).
- Realigns water molecules so water cleans better for softer skin, silkier hair, cleaner laundry.
- Reduces lime scale and corrosion damage to pipes and other appliances that use water.
- Makes cleaning products last longer and more effective.
- Self cleaning systems frees you from maintenance worries.
- Eliminates high maintenance costs other water systems require.

## What is Hard Water?

Hard untreated water leaves damaging residue on faucets, pipes, water using appliances, water heaters and other appliances, decreases their efficiency and operating life. Hard water deposits collect in your clothing dulling the colors and shortening the fabric life.

The water conditioner (or softener) converts the incoming water "hardness", consisting primarily of calcium and magnesium to sodium (or potassium) salts; reducing scaling and spotting of dishes, showers and water faucet but also placing a significant amount of sodium or potassium chloride salts into the entire home water system.

The sodium salts are known to be a health concern to about 25% of the population which is known to suffer from hypertension, high blood pressure, or other medical problems such as diabetes, heart and blood ailments.

Our water systems save you time, trouble and money \$\$\$ without the unhealthy addition of sodium (salt) or potassium. They also leave beneficial minerals in the water ("softeners" strip minerals from the water). They realign mineral molecules so water cleans better for softer skin, silkier hair, cleaner laundry. They also reduce lime scale and corrosion damage to pipes and water using appliances. Our systems also make cleaning products more effective and last longer by extending the life of water-using appliances.

## What is a "Whole House" Water System?

A "whole house water" system is a comprehensive solution to your family's home needs. It is also known as a point of entry filter, is designed to filter all the incoming water to your home. This system replaces ordinary water softeners, monthly exchange tanks that are annoying and time consuming. Never having to buy bottled water and eliminate the hassles of transporting it from the store to your home.

## Is it safe for the Environment?

**YES!** It does not produce any toxins that contaminate rivers, lakes, streams, or ground water.

The environmental choice for most cities throughout the United States. Safe water from the time you take a shower in the morning to the time you brush your teeth at night.

## Reverse Osmosis, what is that?

Reverse Osmosis complements the "Whole House" system by giving you the same clear, odor free and great tasting pure water at your kitchen sink for pennies on the dollar compared to expensive bottled water. We offer 3, 4, or 5 stage Reverse Osmosis systems that deliver up to 50 gallons of water per day.

## What We Offer:

- Water Treatment
- Water Filtration Systems
- Reverse Osmosis Drinking Water Systems
- Bottle-less Water Coolers
- Commercial & Industrial Water Treatment
- Water Softener Repair
- Water Softener Salt Delivery
- Water Softener Maintenance
